

I would like to start the evaluation by summarizing my main points of improvement.

1. More pages
2. Better font styling
3. Layout improvement
4. Attention catching details
5. Inconsistency

While I reached the minimum 5 pages required, I do think there could have been more pages. For example, the courses could have been listed in a digital prospectus, that could have been its own page. There certainly should have been more pages that could have been accessed from other pages instead of the navigation bar. There could also have been a page with the downloadable calendar as well as a calendar you can just view on the website. When asked what improvements I could make this was one of the responses "More tabs in the nav bar", I did not adhere to this when doing my redesign.

When asked if they experienced any accessibility issues most people said no. for that reason I did not think about text size much. This was a bad design choice as it made some of the information hard to read as mentioned by my Vivien "the text clashes with other elements". Different font weights and colours could have been used better to highlight important information. It was also pointed out to me that my website does not have any clear focus or information that immediately stands out. More text styling could have improved this issue.

When receiving feedback, I was told my layout was not too bad but my padding could use some work. I am happy that I managed to create an understandable layout. I felt encouraged to do this because of this particular feedback I received in my form "Make it more organised, such as most important information first like courses or the search bar". Although this was likely my strongest aspect of improvement it still was not perfect. The code used to create this layout could have certainly been improved like for example having consistent padding and using the right styling for certain pages to make everything fit the way I want.

Overall my main downfalls were inconsistency and lack of a clear focus. Most of the places I fell short somehow related back to these two elements.

All that being said I don't think the website actually turned out bad considering it was my second ever website and I struggle greatly with remembering what my code means and even understanding it in the first place. I am sure that most if not all of the issues with my website would have been avoided if I had more technical knowledge on coding.

Constructive feedback from Vivien Szigeti (Peer feedback):

My immediate impressions of this website was 2004 style navigation with 2025 memetic sensibilities. It made for quite a funny contrast; the site's construction is very utilitarian, with the navigation bar taking you to the exact pages Adriana had coded, but the elements themselves are very silly. It's not very good, as such, for a professional site, though it would certainly appeal to the 15-16 year olds applying to MCAST.

Said utilitarianism is both a boon and a flaw of the site; flourish is minimal, meaning the information is easy to see and process, and getting lost on this site would be very difficult. The home page includes a 'Welcome to MCAST' banner, which is a nice touch. The lack of images and scripted elements also means the site loads very quickly. However, it also makes it a bit of a chore to look at, since there's not much to grab your eyes. And so, everything fights for your attention because nothing particularly stands out. That being said, links and buttons are clear, which makes navigation easier.

The primary issues are with the padding, text and styling. On some paragraphs, the padding is minimal, and the text clashes with other elements. The text is also quite inconsistent at times, such as on the Services/Career Help pages versus the Student Info Page. This is indicative of a larger issue of inconsistency and lack of styling though, and not exclusive to the text only. The contact form on Contact page is the biggest offender here, as both its internal alignment and the way it is placed on the site feels off. There's a lot of negative or wasted space that could've been used to style the form to be more pretty.

For more minor aspects, the colours are more pleasant than the official site, but some of it is inconsistent. The navigation bar colour doesn't appear anywhere else on the website, and feels a bit too warm compared to the rest of the palette. Also, the font was not changed, meaning the website used a default serif font. Not a big deal, it just doesn't quite match MCAST, which seems allergic to anything but sans serif fonts.
